- Flow Builder events
- Store / Admin API
- Scheduled tasks
- Message queue
- CMS blocks / elements
- Admin modules (Vue)
- Storefront JS plugins
- Themes
- B2B pricing
- SEO URLs

LANGUAGES

Serbian	Native
English	Professional

PROFILE

Shopware full-stack developer with 10 years of web development experience, the last four dedicated entirely to **Shopware 6** and the ecosystem around it.

- Plugin development across backend, storefront and administration
- DevOps – CI/CD, deployments and multi-environment infrastructure
- Third-party API integrations
- Strategies that extend e-commerce capabilities far beyond the framework's native features

CONSULTING & COMMUNICATION

- **Requirements elicitation & ticket breakdown** – work directly with clients to uncover the real need behind a request, ask the right questions early and agree on scope, then translate it into clear, estimable tickets with acceptance criteria that the team can pick up without back-and-forth.
- **Team consulting & continuous documentation** – technical point of contact for the whole development team (architecture decisions, code review, unblocking colleagues, keeping the codebase consistent). Treats continuous reports and analysis documents as the backbone of agile, accurate development and progress tracking, steadily building a rich knowledge base of project history and decisions that powers every future AI-assisted analysis.

AI-ASSISTED DEVELOPMENT

- **Claude Code as the primary tool** – strictly organised context for every branch and ticket (isolated sessions and git worktrees), so each session starts with exactly the knowledge the task needs and nothing leaks between tasks.
- **Two-level skillsets, built for multi-project teams** – a generic, company-wide set of skills applied to every project, keeping architecture and conventions coherent across all of them, making each easier to maintain and extend, and shortening the learning curve for newcomers. On top of it, a deeper layer of project-specific skills and `CLAUDE.md` committed to each repository, shared between developers and continuously upgraded with every change.
- **Architecture & quality standards** – strict separation of concerns, predefined architectural rules and naming conventions enforced across the entire project, built on solid OOP (SOLID, dependency injection, design patterns) and backed by strong QA; AI-generated code is held to exactly the same standards as hand-written code.

BACKEND

PHP 8 · Symfony · MySQL / MariaDB · REST API integrations · Symfony Messenger · Redis · Elasticsearch / OpenSearch · Composer · Guzzle · PHPStan

FRONTEND

JavaScript (ES6+) · Vue.js · Twig · HTML5 · CSS3 / SCSS · Bootstrap 5 · Webpack · Vite

DEVOPS

Docker / Compose · GitHub Actions · PHP Deployer · Atomic releases · Upsun / Platform.sh · Linux / SSH · Nginx / Apache · Makefile automation · DB sync & sanitising · Cron & queue workers · Gitflow

AI

Claude Code · CLAUDE.md / skills · Git worktrees · Cursor · OpenAI API · Gemini API

WORK EXPERIENCE

Shopware 6 Full-Stack Developer

Jun 2026 – Present

Blue Design – felgen-schweiz.ch, Switzerland · Part-time contract · Remote

Swiss B2C and B2B online shop for wheels and tyres, built on Shopware 6 and available in four languages. Same scope as on enthus.de – custom plugins, storefront theme, integrations and deployment pipeline – with a strong focus on the sales process.

- **Plugin development** – **30+ custom plugins** built or maintained: B2B pricing and registration, product catalog and tyre finder, redirects and SEO, checkout and order flows.
- **respond.io integration** – new customers are synced as contacts and their conversations opened, assigned and tagged automatically, so the sales team picks up every lead right away.
- **AI across the sales cycle** – Claude Code for development and the OpenAI / Gemini APIs in the shop itself, optimising the whole sales cycle from automated catalog translation (DE / FR / EN / IT) to lead handling and customer communication.
- **DevOps** – zero-downtime atomic deployments with GitHub Actions and PHP Deployer across six environments, nightly production-to-mirror sync with data sanitising.

Stack: Shopware 6, PHP, Symfony, MariaDB, Twig, SCSS, JavaScript, Vue.js, respond.io API, OpenAI / Gemini APIs, Claude Code, GitHub Actions, PHP Deployer, Docker

Shopware 6 Full-Stack Developer

Sep 2022 – 2026

openinnovation.me (formerly BEMapps), Belgrade · Full-time · Remote

Large B2B e-commerce platform **enthus.de** for the German market, built on Shopware 6 and connected to the company's customer portal. Part of a distributed team of senior developers.

- **Plugin development** – **50+ custom plugins** built or maintained across the whole Shopware stack.
- **CMS and theming** – build and extend Shopping Experience blocks and elements, the storefront theme and responsive layouts for two sales channels.
- **Integrations** – REST API integrations with external event, search, marketing-automation and webinar platforms, including scheduled synchronisation.
- **DevOps** – CI/CD pipelines with GitHub Actions (build, linting, automated deployment to staging and production) and Docker-based development environments.

Stack: Shopware 6, PHP, Symfony, MySQL, Twig, SCSS, JavaScript (ES6+), Vue.js, REST APIs, Redis, Docker, GitHub CI/CD, Jira

WORK EXPERIENCE (CONTINUED)

Development Team Lead

Feb 2021 – Aug 2022

Condor Gaming (today Orange IT Solutions), Belgrade · Full-time · On-site

- **Led the Kalima development team** – sprint planning, task breakdown in Jira, code reviews, mentoring and onboarding of developers.
- **Project management** – managed projects from planning to delivery, coordinated the work between management, clients and the development team, and kept every project on schedule.
- **Hands-on development** – designed and built **condorgaminggroup.com**, kalimabusiness.com and iGaming web projects such as mr247bet.com.

Stack: PHP, MySQL, WordPress, JavaScript (ES6+), jQuery, Bootstrap 5, SCSS, Apache / Nginx, GitLab, Jira

Letter of recommendation (PDF)

Web Developer

Feb 2020 – Feb 2021

HIVEMIND, Belgrade · Full-time · On-site

Custom WordPress themes and PHP websites for agency clients, from design hand-off to responsive front-end and deployment.

Stack: PHP, MySQL, WordPress, HTML5, CSS3 / SASS, JavaScript, jQuery, Bootstrap

Freelance Web Developer

2016 – 2020

Self-employed, Belgrade · Freelance · Remote

Websites for small businesses and private clients, from first meeting to launch and support – e.g. blackwinch.eu, urineseparator.com, estherjacobs.info.

Stack: PHP, MySQL, WordPress, HTML5, CSS3, JavaScript, jQuery, Bootstrap

EDUCATION

Self-taught software developer – continuous learning through official Shopware documentation, open-source code and hands-on project work.

Electro-mechanical Technician – technical school, Užice, Serbia.
